

PCT

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

(Chapter II of the Patent Cooperation Treaty)

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 63904A	FOR FURTHER ACTION		See Form PCT/PEA/416
International application No. PCT/US2004/043346	International filing date (day/month/year) 24.12.2004	Priority date (day/month/year) 24.12.2003	
International Patent Classification (IPC) or national classification and IPC C08L101/00, C08K5/3435, C08K5/34, C08L23/10			
Applicant DOW GLOBAL TECHNOLOGIES INC et al.			
<p>1. This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36.</p> <p>2. This REPORT consists of a total of 12 sheets, including this cover sheet.</p> <p>3. This report is also accompanied by ANNEXES, comprising:</p> <p>a. <input type="checkbox"/> sent to the applicant and to the International Bureau a total of sheets, as follows:</p> <p><input type="checkbox"/> sheets of the description, claims and/or drawings which have been amended and are the basis of this report and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).</p> <p><input type="checkbox"/> sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.</p> <p>b. <input type="checkbox"/> (sent to the International Bureau only) a total of (indicate type and number of electronic carrier(s)) , containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).</p>			
<p>4. This report contains indications relating to the following items:</p> <p><input checked="" type="checkbox"/> Box No. I Basis of the opinion</p> <p><input type="checkbox"/> Box No. II Priority</p> <p><input type="checkbox"/> Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability</p> <p><input checked="" type="checkbox"/> Box No. IV Lack of unity of invention</p> <p><input checked="" type="checkbox"/> Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement</p> <p><input type="checkbox"/> Box No. VI Certain documents cited</p> <p><input checked="" type="checkbox"/> Box No. VII Certain defects in the international application</p> <p><input checked="" type="checkbox"/> Box No. VIII Certain observations on the international application</p>

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2004/043346

Box No. I Basis of the report

1. With regard to the **language**, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
- ☐ This report is based on translations from the original language into the following language , which is the language of a translation furnished for the purposes of:
- ☐ international search (under Rules 12.3 and 23.1(b))
 - ☐ publication of the international application (under Rule 12.4)
 - ☐ international preliminary examination (under Rules 55.2 and/or 55.3)
2. With regard to the **elements*** of the international application, this report is based on *(replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report)*:

Description, Pages

1-26 as originally filed

Claims, Numbers

1-29 as originally filed

Drawings, Sheets

1-3 as originally filed

☐ a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing

3. ☐ The amendments have resulted in the cancellation of:

- ☐ the description, pages
- ☐ the claims, Nos.
- ☐ the drawings, sheets/figs
- ☐ the sequence listing *(specify)*:
- ☐ any table(s) related to sequence listing *(specify)*:

4. ☐ This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

- ☐ the description, pages
- ☐ the claims, Nos.
- ☐ the drawings, sheets/figs
- ☐ the sequence listing *(specify)*:
- ☐ any table(s) related to sequence listing *(specify)*:

* If item 4 applies, some or all of these sheets may be marked "superseded."

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2004/043346

Box No. IV Lack of unity of invention

1. ☒ In response to the invitation to restrict or pay additional fees, the applicant has:
- ☐ restricted the claims.
 - ☐ paid additional fees.
 - ☐ paid additional fees under protest.
 - ☒ neither restricted nor paid additional fees.
2. ☐ This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is
- ☐ complied with.
 - ☒ not complied with for the following reasons:
see separate sheet
4. Consequently, this report has been established in respect of the following parts of the international application:
- ☐ all parts.
 - ☒ the parts relating to claims Nos. 1-10,24,28,29 .

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes: Claims	
	No: Claims	1-10,24,28,29
Inventive step (IS)	Yes: Claims	
	No: Claims	1-10,24,28,29
Industrial applicability (IA)	Yes: Claims	1-10,24,28,29
	No: Claims	

2. Citations and explanations (Rule 70.7):

see separate sheet

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

**INTERNATIONAL PRELIMINARY REPORT
ON PATENTABILITY**

International application No.
PCT/US2004/043346

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Re Item IV

Lack of unity of invention

The examiner found that the application lacks unity within the meaning of Rule 13.1 PCT.

The common concept between claim 1 and the rest of the independent claims is a free-radical carbon free-radical trapping species -carbon crosslinkable polymeric composition comprising a free radical polymer and free radical trapping species.

Document D1 (EP1264857) discloses a curable polymeric composition comprising a free radical polymer and free radical trapping species.

All the technical features of the common concept as indicated above are known from document D1. Therefore, the application lacks unity of invention within the meaning of Rule 13(1) PCT. The especial technical features according to rule 13 (2) PCT which provide a contribution over the prior art are not so linked to form a unitary inventive concept.

Claim 1 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer, a free-radical inducing species and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Claim 11 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer (using shear, radiation or heat), and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Claim 12 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer, a free-radical inducing species and a free-radical trapping species. The free-radical trapping species are graftable onto the polymer via free radical initiated carbon-FRTS-carbon coupling bonds. Claim 13 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer, a free-radical inducing species and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer.

Claim 17 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer (using shear, radiation or heat), and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Claim 18 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer, a free-radical inducing species and a free-radical trapping species. The free-radical trapping species are graftable onto the polymer via free radical initiated carbon-FRTS-carbon coupling bonds. Claim 19 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a polymer which is a free-radical degradable polymer, or carbon-carbon crosslinkable polymer and pendant stable free-radical. Claim 20 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer and pendant stable free-radical. Claim 21 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer and a free-radical trapping species grafted via free-radical initiated carbon-FRTS-carbon coupling bond to the polymer. Claim 22 defines a carbon-carbon crosslinkable polymeric composition comprising a carbon-carbon crosslinkable polymer and pendant stable free-radical. Claim 23 defines a free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer and a free-radical trapping species grafted via free-radical initiated carbon-FRTS-carbon coupling bond to the polymer. Claim 24 defines a process for preparing a carbon-carbon crosslinkable polymer by admixing a free-radical degradable polymer, free-radical inducing species and a free-radical trapping species. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Secondly grafting the free-radical trapping species onto the polymer. Claim 25 defines a process for preparing a carbon-carbon crosslinkable polymer by admixing a free-radical degradable polymer and free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Secondly admixing a free-radical inducing species and thirdly grafting the free-radical trapping species onto the polymer. Claim 26 defines a process for preparing a carbon-carbon crosslinkable polymer by admixing a free-radical carbon-carbon crosslinkable polymer, free-radical inducing species and a free-radical trapping species. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Secondly grafting the free-radical trapping species onto the polymer.

Claim 27 defines a process for preparing a carbon-carbon crosslinkable polymer by admixing a free-radical carbon-carbon crosslinkable polymer and free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Secondly admixing a free-radical inducing species and thirdly grafting the free-radical trapping species onto the polymer. Claim 28 defines an article of manufacture prepared from the process disclosed in claims 24-27. Claim 29 defines an article of manufacture prepared from the process disclosed in claims 24-27 selected from e.g. wire-cable applications.

Therefore the different inventions lead to different results. Consequently, the present set of claims breaks up in seventeen inventions as follows:

Claims 1-10 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer, a free-radical inducing species and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer.

Claim 11 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer (using shear, radiation or heat), and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer.

Claim 12 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer, a free-radical inducing species and a free-radical trapping species. The free-radical trapping species are graftable onto the polymer via free radical initiated carbon-FRTS-carbon coupling bonds.

Claims 13-16 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer, a free-radical inducing species and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer.

Claim 17 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer (using shear, radiation or heat), and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer.

Claim 18 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer, a free-radical inducing species and a free-radical trapping species. The free-radical trapping species are graftable onto the polymer via free radical initiated carbon-FRTS-carbon coupling bonds.

Claim 19 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a polymer which is a free-radical degradable polymer, or carbon-carbon crosslinkable polymer and pendant stable free-radical.

Claim 20 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer and pendant stable free-radical.

Claim 21 : A free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer and a free-radical trapping species grafted via free-radical initiated carbon-FRTS-carbon coupling bond to the polymer.

Claim 22 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a carbon-carbon crosslinkable polymer and pendant stable free-radical.

Claim 23 : A free-radical carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer and a free-radical trapping species grafted via free-radical initiated carbon-FRTS-carbon coupling bond to the polymer

Claim 24 : A process for preparing a free-radical carbon-FRTS-carbon crosslinkable polymer by admixing a free-radical degradable polymer, free-radical inducing species and a free-radical trapping species. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Secondly grafting the free-radical trapping species onto the polymer.

Claim 25 : A process for preparing a free-radical carbon-FRTS-carbon crosslinkable polymer by admixing a free-radical degradable polymer and free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Secondly admixing a free-radical inducing species and thirdly grafting the free-radical trapping species onto the polymer.

Claim 26 : A process for preparing a free-radical carbon-FRTS-carbon crosslinkable polymer by admixing a free-radical carbon-carbon crosslinkable polymer, free-radical inducing species and a free-radical trapping species. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Secondly grafting the free-radical trapping species onto the polymer

Claim 27 : A process for preparing a polymer by admixing a free-radical carbon-FRTS-carbon crosslinkable polymer and free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Secondly admixing a free-radical inducing species and thirdly grafting the free-radical trapping species onto the polymer.

Claim 28 : An article of manufacture prepared from the process disclosed in claims 24-27.

Claim 29 : An article of manufacture prepared from the process disclosed in claims 24-27 selected from e.g. wire-cable applications.

There are seventeen independent claims each one containing especial technical feature not linked by a common concept. Therefore, seventeen different inventions can be identified. However, the examiner has grouped said seventeen inventions in only six for the benefit of the applicant according to the following :

Claims 1-10,24,28,29 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer, a free-radical inducing species and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Article and process for the preparation of said carbon-carbon crosslinkable polymeric composition.

Claims 11,19,20,21,25,28,29 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer (using shear, radiation or heat), and a free-radical trapping species having at least two trapping sites. Optionally, the carbon-FRTS-carbon crosslinkable polymeric composition comprising also a pendant stable free-radical. The free-radical trapping species suppresses degradation of the polymer, and are graftable onto the polymer. Article and process for the preparation of said carbon-carbon crosslinkable polymeric composition.

Claim 12 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical degradable polymer, a free-radical inducing species and a free-radical trapping species. The free-radical trapping species are graftable onto the polymer via free radical initiated carbon-FRTS-carbon coupling bonds.

Claims 13-16,26,28,29 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer, a free-radical inducing species and a free-radical trapping species having at least two trapping sites. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Article and process for the preparation of said carbon-carbon crosslinkable polymeric composition.

Claims 17,19,22,23,27,28,29 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer (using shear, radiation or heat), and a free-radical trapping species having at least two trapping sites. Optionally, the carbon-FRTS-carbon crosslinkable polymeric composition comprising also a pendant stable free-radical. The free-radical trapping species suppresses carbon-carbon crosslinking of the polymer, and are graftable onto the polymer. Article and process for the preparation of said carbon-carbon crosslinkable polymeric composition.

Claim 18 : A carbon-FRTS-carbon crosslinkable polymeric composition comprising a free-radical carbon-carbon crosslinkable polymer, a free-radical inducing species and a free-radical trapping species. The free-radical trapping species are graftable onto the polymer via free radical initiated carbon-FRTS-carbon coupling bonds.

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
Reference is made to the following documents:

D1 : EP1264857

D2 : WO02092561

Novelty (Art. 33 (2) PCT)

1. The document D1 discloses a curable polymeric composition comprising a free radical polymer and free radical trapping species. The composition is used in foam applications. The subject matter of claims 1-10,24,28 and 29 over D1 is considered to be not novel (Art. 33(2) PCT).

2. The document D2 discloses an organic peroxide heat stabiliser polymeric composition comprising a polypropylene polymer, a free radical polymer and free radical trapping species. The free radical polymer and free radical trapping species are identical to the one used in the present application. The subject matter of claims 1-10,24,28 and 29 over D2 is considered to be not novel (Art. 33(2) PCT).

Inventive step (Art. 33(3) PCT)

All the technical features of the present claims are described in document D1. Therefore the claims 1-10,24,28 and 29 do not involve an inventive step (Art. 33(3) PCT).

Certain defects in the international application

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in document D1 is not mentioned in the description, nor is this document identified therein.

The specification for an international application should be capable of being understood without reference to any other document (cf PCT Guidelines Ch. II 4.17). The expression "hereby incorporated by reference" found in the description are therefore not according to the PCT requirements.

Re Item VIII

Certain observations on the international application

Clarity (Art. 6 PCT)

1. The relative term "substantially" used in the claims of the present application has no well-recognised meaning and leaves the reader in doubt as to the meaning of the technical feature to which it refers, thereby rendering the definition of the subject-matter of said claim unclear (Article 6 PCT).
2. The claims 2 and 3 do not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claims attempt to define the subject-matter in terms of the result to be achieved, which merely amounts to a statement of the underlying problem, without providing the technical features necessary for achieving this result.
3. The claims of the present application are not supported by the description as required by Article 6 PCT. This inconsistency between the claims and the description leads to doubt concerning the matter for which protection is sought, thereby rendering the claims unclear.
